

Economics 101A

(Lecture 20)

Stefano DellaVigna

April 7, 2015

Outline

1. Game Theory
2. Oligopoly: Cournot
3. Oligopoly: Bertrand

1 Game Theory

- Nicholson, Ch. 8, pp. 251-268
- Unfortunate name
- Game theory: study of decisions when payoff of player i depends on actions of player j .
- Brief history:
 - von Neuman and Morgenstern, Theory of Games and Economic Behavior (1944)
 - Nash, Non-cooperative Games (1951)
 - ...
 - Nobel Prize to Nash, Harsanyi (Berkeley), Selten (1994)

- Definitions:

- Players: $1, \dots, I$

- Strategy $s_i \in S_i$

- Payoffs: $U_i(s_i, s_{-i})$

- Example: Prisoner's Dilemma

- $I = 2$

- $s_i = \{D, ND\}$

- Payoffs matrix:

$1 \setminus 2$	D	ND
D	$-4, -4$	$-1, -5$
ND	$-5, -1$	$-2, -2$

- What prediction?
- Maximize sum of payoffs?
- Choose dominant strategies
- **Equilibrium in dominant strategies**
- Strategies $s^* = (s_i^*, s_{-i}^*)$ are an Equilibrium in dominant strategies if

$$U_i(s_i^*, s_{-i}) \geq U_i(s_i, s_{-i})$$

for all $s_i \in S_i$, for all $s_{-i} \in S_{-i}$ and all $i = 1, \dots, I$

- Battle of the Sexes game:

He \ She	Ballet	Football
Ballet	2, 1	0, 0
Football	0, 0	1, 2

- Choose dominant strategies? Do not exist

- **Nash Equilibrium.**

- Strategies $s^* = (s_i^*, s_{-i}^*)$ are a Nash Equilibrium if

$$U_i(s_i^*, s_{-i}^*) \geq U_i(s_i, s_{-i}^*)$$

for all $s_i \in S_i$ and $i = 1, \dots, I$

- Is Nash Equilibrium unique?

- Does it always exist?

- Penalty kick in soccer (matching pennies)

Kicker \ Goalie	L	R
L	0, 1	1, 0
R	1, 0	0, 1

- Equilibrium always exists in mixed strategies σ

- Mixed strategy: allow for probability distribution.

- Back to penalty kick:

- Kicker kicks left with probability k
- Goalie kicks left with probability g

- utility for kicker of playing L :

$$\begin{aligned}U_K(L, \sigma) &= gU_K(L, L) + (1 - g)U_K(L, R) \\ &= (1 - g)\end{aligned}$$

- utility for kicker of playing R :

$$\begin{aligned}U_K(R, \sigma) &= gU_K(R, L) + (1 - g)U_K(R, R) \\ &= g\end{aligned}$$

- Optimum?

- $L \succ R$ if $1 - g > g$ or $g < 1/2$

- $R \succ L$ if $1 - g < g$ or $g > 1/2$

- $L \sim R$ if $1 - g = g$ or $g = 1/2$

- Plot best response for kicker

- Plot best response for goalie

- Nash Equilibrium is:
 - fixed point of best response correspondence
 - crossing of best response correspondences

2 Oligopoly: Cournot

- Nicholson, Ch. 15, pp. 534-540
- Back to oligopoly maximization problem
- Assume 2 firms, cost $c_i(y_i) = cy_i$, $i = 1, 2$
- Firms choose simultaneously quantity y_i
- Firm i maximizes:

$$\max_{y_i} p(y_i + y_{-i}) y_i - cy_i.$$

- First order condition with respect to y_i :

$$p'_Y(y_i^* + y_{-i}^*) y_i^* + p - c = 0, \quad i = 1, 2.$$

- Nash equilibrium:
 - y_1 optimal given y_2 ;
 - y_2 optimal given y_1 .

- Solve equations:

$$p'_Y (y_1^* + y_2^*) y_1^* + p - c = 0 \text{ and}$$

$$p'_Y (y_2^* + y_1^*) y_2^* + p - c = 0.$$

- Cournot -> Pricing above marginal cost
- Numerical example -> Problem set 5

3 Oligopoly: Bertrand

- Nicholson, Ch. 15, pp. 533-534
- Cournot oligopoly: firms choose quantities
- Bertrand oligopoly: firms first choose prices, and then produce quantity demanded by market
- Market demand function $Y(p)$
- 2 firms
- Profits:

$$\pi_i(p_i, p_{-i}) = \begin{cases} (p_i - c) Y(p_i) & \text{if } p_i < p_{-i} \\ (p_i - c) Y(p_i) / 2 & \text{if } p_i = p_{-i} \\ 0 & \text{if } p_i > p_{-i} \end{cases}$$

- First show that $p_1 = c = p_2$ is Nash Equilibrium
- Does any firm have a (strict) incentive to deviate?
- Check profits for Firm 1
- Symmetric argument for Firm 2

- Second, show that this equilibrium is unique.
- For each of the next 5 cases at least one firm has a profitable deviation
- Case 1. $p_1 > p_2 > c$
- Case 2. $p_1 = p_2 > c$
- Case 3. $p_1 > c \geq p_2$

- Case 4. $c > p_1 \geq p_2$
- Case 5. $p_1 = c > p_2$
- Only Case 6 remains: $p_1 = c = p_2$, which is Nash Equilibrium
- It is unique!

- Notice:
- To show that something is an equilibrium \rightarrow Show that there is **no** profitable deviation
- To show that something is **not** an equilibrium \rightarrow Show that there is **one** profitable deviation

- Surprising result of Bertrand Competition
- Marginal cost pricing
- Two firms are enough to guarantee perfect competition!
- Realistic? Price wars between PC makers

4 Next lecture

- Oligopoly: Bertrand
- Dynamic games
- Stackelberg duopoly
- Auctions
